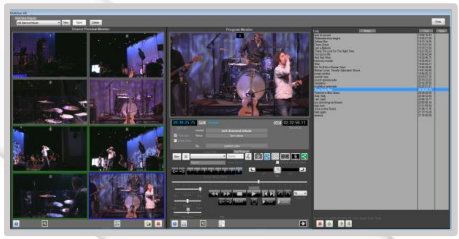
V-Station®HD

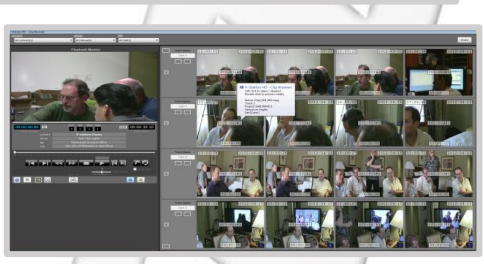
Studio Companion Software

Demo Version Pre-Installed In All Studio4 & Studio8 Systems

Project Management Module



Multi-View® Playback/Log/Edit Module



Clip Library/Clip Browser Module

- **Turbo-Charge Your V-Station®HD Studio System**
- **Synchronized Playback, Editing & Delivery**

V-Station® HD

Studio Companion Software

Why V-Station HD Studio Companion Software

Once the video capture phase of your V-Station HD project is finished, you will need to explore, evaluate, log, edit, and distribute the content. This can be done with your V-Station HD Studio DVR with the optional Studio Companion Software.

Familiar Features & Capabilities

V-Station HD Studio Companion Software incorporates the same user interface design. The software, when activated, will enable you to proceed seamlessly and efficiently to complete projects within the V-Station HD Studio system. All the project metadata and content, including clips, playlists, logs, shot lists, and edit decision lists are immediately available.

The Tools To Work Your Way

V-Station HD Studio Companion Software supports multiple workflow styles and incorporates the following:

- **Project Management Module**

  Comprehensive Management Tools
  Manage the video project & your clip library.

- **Playback & Log Module**

  Play video files individually or synchronously
  Up to 8 clips at a time.

  Clip Browsing & Event Annotation
  Browse by project, reel, or scene. Mark and log important events in your video footage.

- **Edit & Deliver Module**

  Rough-cut Multi-Cam Editing using various formats
  In minutes and without complex timelines.

  XML Project Transfer To Leading NLE Systems
  Fast project transfer to Adobe Premiere Pro, Apple Final Cut, and Sony Vegas Pro.

  Share via Direct Upload & Delivery
  Send edited reels to FTP, YouTube, and other social media sites minutes after editing.

Recreate The Original Event

V-Station HD Studio Companion Software will synchronously play back all recorded camera feeds (up to 8). This enables you to do virtual live switching between camera angles (from your recorded footage) for as many alternate versions as you may desire. If your video footage is for analysis, you and your colleagues can each log and annotate as necessary.

Simultaneous Playback & Review Of Your Footage

Even while recording, you can play back previous shots using the built-in media player. Pull up the playlist by project and review your footage. Log footage for each frame. During play back, the TruSync® feature enables up 8 clips at one time to be synchronized by either time or event from any V-Station HD project.

The Workflow Advantage—Seamless XML NLE Transfer

V-Station HD projects are transferred to your NLE system with clips automatically organized into bins and sequences (generated from the EDL)—already synchronized. No more tedious hours trying to locate the desired shot or clip, then sync and edit.

Distribute Your Project

A click of your mouse will send your V-Station HD project to a server, a FTP site, or to a YouTube location for immediate access by your colleagues and clients—wherever they may be.
