

Multi-View® HD Pro

Multi-Cam Editor PC Software

Create A Multi-Cam Production Minutes After The Shoot

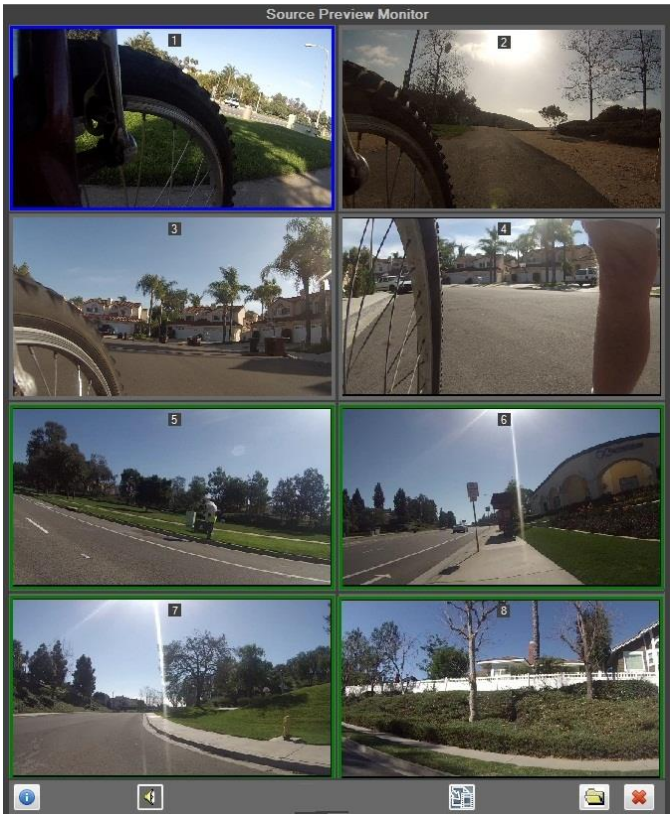

- Synchronously play back up to 8 video files simultaneously
- Mark events & enter log descriptions for any video frame
- No time-consuming file importation or transcoding necessary to start editing
- Produce multi-cam videos in minutes—without complex video editing software
- Direct & easy upload full HD videos to YouTube or FTP sites
- Compatible with H.264/MP4 file formats used by GoPro® & other action cams

Multi-View® HD Pro

Multi-Cam Editor PC Software

Play back Up To 8 Videos In Source Monitors

Multi-View HD Pro can synchronously play back multiple videos taken at different angles—displaying up to 8 different views.

Source Monitor Panel

FutureVideo's proprietary TruSync® feature synchronizes videos recorded from independent cameras and is fast and easy to use. Changing the frame position of any video will immediately re-synchronize all of the other videos.

Mark & Log Event Points For Easy Access To Any Frame

Any video frame position can be marked and either a numeric marker or a text description of the location may be associated with an event to be remembered. Access to each video's event points can be viewed in the Event Log window.

Log	Notes	Time	Type
	Medium Shot	00:00:04:19	.
	Joe takes control of situation	00:00:02:39	.
	Bill turns to Joe	00:00:08:44	.
	Both leave the room	00:00:13:36	.
	Danny comes into the room	00:00:13:36	.
	There is a dis-agreement	00:00:18:54	.
	Danny turns to look outside	00:00:21:07	.
	Bill comes into room	00:00:27:48	.
	Bill and Danny have a drink	00:00:30:02	.

Log Panel

Event descriptions may also be added with a picture snapshot. Clicking on an event log entry will automatically seek to all video positions that are synchronized to the event.

Create Multi-Cam Edits Quickly With AutoProducer®

Unlike popular video editing systems, no time consuming import or transcoding or having to make "multi-clips" is required to start editing. Since all original footage is easily synchronized, switching between videos as they play—as though you were doing live switching—will produce a finished-cut that can be output to disk or to the web. You're free to create as many alternate versions as you may need. Multi-cam editing could not be easier!

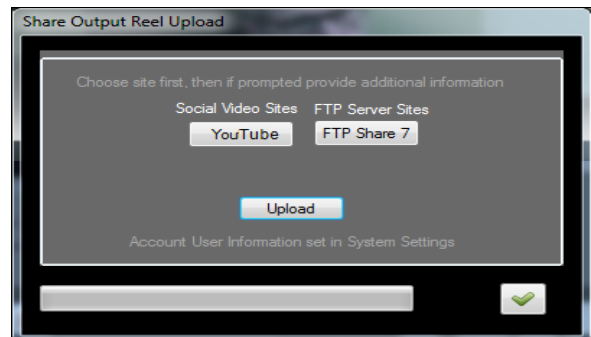

AutoProducer Panel

Replace Audio With Advanced ADR Features

Once all the edits have been completed, AutoProducer's ADR provides the ability to replace the audio track from any of the cameras audio or from an external audio source for music or narration.

Output & Share Your Content To YouTube® or FTP Sites

Multi-View HD Pro software enables you to deliver your video output movie directly to YouTube or an FTP site with its built-in share uploader. Multi-View edited videos can be output into a variety of HD formats and sizes* (see note below), and their ready to upload to YouTube in full 1080p HD.

Share Output Reel Upload Panel

Set Playback Speed & Step Single Frames

When slow motion analysis is required, Multi-View HD Pro provides a control to change the playback speed of the video from 0.1x to 4x playback speed. In addition with the advanced transport controls, step video forward or backwards 1 frame at a time. Cue to key points, and all your angles will track with each other.

Free Trial Offer

Explore how Multi-View HD Pro can enhance your application. Download a demo version today from:
